A method of isolating and purifying an embryonic stem cell culture,

said method comprising:

(a) preparing a first culture by culturing dissociated cells from an

swine embryo in conditioned stem cell medium in the absence of a feeder layer; and

(b) subculturing the first culture until a second stable culture with

morphological features and growth parameters characteristic of an embryonic stem cell

culture is established.

## **KEWVKKS**

## I. Status of the Claims

Claims 1 is amended.

Claims 22 and 23 are added.

Claims 1-13, 15-23 are pending.

## II. The Specification is Enabling for Ungulates

Claims 1-6, 9-13 and 15-20 were rejected under 35 U.S.C. § 112, first

baragraph.

The examiner's first basis for this rejection is:

"The specification does not provide any working examples or specific guidance regarding production of embryonic stem (ES) cells of species other than swine. .."
